

# Full Body Female Cradle-to-cradle Modular System

Full Body Mannequino with Arms is designed for lightweight deployable display needs and flat packs away into an incredibly small footprint for a mannequin form. The flat pack style of the Full Body makes it incredibly easy and cost effective for shipping and storage purposes.

The versatile flexible nature of the Full Body means that it is resilient and durable. It is easy to adjust for different display needs and can be reused time and time again, increasing the life of the product.

The Full Body is also simple and straightforward to assemble making it ideal for events, exhibitions, pop up installations and international roll out campaigns, and afterwards can be folded away into its tiny box.

The components of the Full Body can be converted into five different forms: Full Body on stand, Full Body hanging, Torso on stand, Torso hanging, and Legs hanging. The Legs can also be adjusted for different leg positions, to provide the gestural qualities desired. - from a relaxed standing pose, to a more active pose.

The arms articulate in 2 positions at the elbow providing various gestures and are designed to pop off and on to allow a very easy garment fitting.

The system packs away into a small box ( 58cm x 48cm x 14cm) for convenient shipping and storage.

One box - four different display options

## Female Full Body Components

The Full Body system's modular components can be transformed into four further display options, extending the life of the system.

## Female Full Body Standing

Clothed

Naked

The system comes with a two part stand and internal support frame, which can be used to display the torso separately, freestanding or hanging.

## Full Body Hanging Mannequino - FEMALE

Holds up to 5kg

The hanging version weighs just 2.3kg and is easy to hang, holding up to 5kg, and is easy to adjust for different hanging positions, giving you and your team full creative control.
